

两料比例阀TPV系列

TPV Series Pro rrrrii

TPV

比例阀 Proportional Valves

主要用于新料，次料，回料，比例互配，并由微电脑控制，可任意设定比例，比例阀作交换吸引，将次料依比例混入新料，使生产过程顺畅及避免原料污染，本质减少成本，减少人工，节省费用，降低成本。

Proportional valves are mainly for main & regrind material in a proportion which controlled by microcontroller & differental proportion of timer. The loading smoothly and minimize the cross conveying. This device can reduce labor cost.

特点 Features

- 外观美观，密封性好。
- 电气性能稳定，气缸动作准确。
- 特有的阀体设计，使物料的输送更加畅通。
- 与配吸料机使用时，无需订购独立控制箱，粉碎机立即回收使用时可减少成品中旧料比例，可以任意按所需比例设定。
- 在多种使用场合时，均可顺利地使用。

Proportional valves are easy to installation and operation. The electrical performance is so stable and the pneumatic valve is so accurate. The valve body design is the proportional material conveying smoothly. When used with the suction machine, no need to order independent control box. When the crusher immediately recycling the material, the proportion of old material can be set according to requirements. Control box is available as option when needed in other situations.
